Vincent Fraillon

— vincent@q4o.com

Data and AI engineer with 8+ years building production systems. I turn Python, C++, SQL and applied AI into useful applications, combining prompt design, product framing and production methodologies.

Jun 2026– **AI applications & data studio** at q4o
Building practical AI applications and production-grade data systems for clients. Python, C++, SQL, prompt design and Lean delivery.

10/2024–03/2026 **VP Data Engineering** at Isskar
Led data engineering strategy and delivery; built teams, methods and reliable data foundations.

2025 **Automated financial reporting** at Cedrus & Partners
Python engine generating 50+ client PowerPoint reports per month from Power BI data, fully automated.

2025 **Modern data stack for senior care KPIs** at Colisée
Modernized finance reporting with Airbyte, Coalesce, Airflow and Power BI; trained the performance team.

2025 **Data governance & platform selection (RFI/RFP)** at CIBTP France
Co-authored the RFI and 170+ requirements: governance, modern data stack, MDM, reversibility, sovereignty; reported the evaluation, 5-year TCO of EUR 2M.

2024–25 **GenAI for wealth advisory** at GAMBIT / BNP Paribas
Whisper + Mistral pipeline for transcribing and summarizing client meetings; modular Azure Kubernetes architecture, deployed on-prem.

2024–25 **AI job market intelligence** at AFDAS
LLM solution updating 70+ job descriptions across sectors, with an LLM-as-judge quality-control workflow.

2023–24 **Supplier insights platform** at Carrefour Links
Supplier-facing platform processing 1B+ rows/day; dbt, BigQuery, Airflow and semantic search for e-commerce insights.

2023 **Salary guarantee system overhaul** at Unédic / DUA
Rebuilt core information system with star-schema data model, Docker microservices and GDPR compliance; 100k+ companies covered.

2022–23 **Industrial anomaly detection** at Saint-Gobain
Real-time vision system across five factories; CNN + OpenCV pipeline processing 10k anomalies/day, Python and C++.

2017–20 **Neuromorphic vision R&D + teaching** at CNRS / Institut de la Vision
Research on event-based vision and 240 hours teaching AI, deep learning, C++ and Java.

Core toolkit

`Python · C++ · SQL · AI applications · LLMs · prompt design · RAG · product framing · Lean / Agile · data engineering · cloud · team leadership`

Certifications

NVIDIA Large-Scale RAG Pipelines (2025) · Google Cloud Professional Data Engineer (2023) · Snowflake SnowPro Core (2022)

Education

MSc Engineering, Sorbonne (2017) · UPMC (2015)
